Honda must consider numerous social issues that have been much discussed, including poverty and refugee problems, human rights issues, climate change, energy problems, occupational health and safety, and the aging of society. Within this context, for Honda, which undertakes a diverse range of businesses globally, understanding its opportunities and responsibilities in the value chain will also be essential for identifying priority issues in management. In addition, to swiftly respond to and accommodate rapid changes in the business environment, it is important to set forth Honda’s future direction in the form of a vision.

The “2030 Vision” embodies an ideal image of what Honda wants to be in the year 2030 in order to continue being “a company that society wants to exist” in 2050, when the Company will have marked more than 100 years since its founding.

In producing the Vision, Honda examined long-term changes in the operating environment from two perspectives: forecasting, or looking ahead to the future from the present point in time, and backcasting, or looking back from 2050 to the present. As the Company continues operating existing businesses, how is it going to transform and evolve the value of existing businesses in step with the rapidly changing expectations of society and the needs of Honda customers? Moreover, how is Honda going to create unprecedented new value in the motorcycle, automobile and life creation businesses, as well as in new areas beyond the framework of its existing operations? To produce a vision that will enable sustainable growth over the long term, Honda has examined the direction of the transformation of its businesses toward 2030 from the three perspectives of “Current, Transformation and New.”
